

Hi, I'm Domenico

Analytics, Milan

MY ROLE AT GUY CARPENTER

I am a senior catastrophe analyst within the analytics team in the Milan office. I help clients understand and measure their catastrophe risk and work with the team to develop mitigating solutions through reinsurance. I am also the coordinator of the EMEA earthquake working group, where I apply my specialist background to research and development activities in the field of earthquake risk at European level.

WHY I CHOSE A CAREER IN (RE)INSURANCE

Reinsurance is undoubtedly a fascinating industry – the intricacy of the international exchange and diversification of large risks across the globe, often supported by sophisticated evaluations and complex solutions, is challenging and motivating. As a plus, the possibility of applying my background in a “non-conventional” field (at least for engineers) was attractive.

WHAT HAS SURPRISED ME THE MOST

I have always been surprised by the multidisciplinary environment of the reinsurance industry. An insurance company deals with a wide variety of risks, and the design of a proper reinsurance solution requires expertise in many areas, such as cat risk evaluation, actuarial methods, market knowledge, finance, etc.

MY BACKGROUND

Before diving into the reinsurance industry, I worked as an engineer in London for a few years. I hold a civil engineering degree and a PhD in earthquake engineering.
