GUY CARPENTER

Hi, I'm Pawel

Analytics, Warsaw

MY ROLE AT GUY CARPENTER

As a leader of GC Analytics for Central and Eastern Europe, I coordinate actuarial and natural catastrophe (NatCat) modeling support for our clients in the region, and assist broking teams in getting reinsurance placements done. The analysis my team and I deliver covers reinsurance structuring and pricing, capital optimization, risk-transfer analysis, assessment of potential impact of natural catastrophes, rating support and many other areas.

WHY I CHOSE A CAREER IN (RE)INSURANCE

I have always enjoyed working with numbers and during my studies, I gained increased interest in probability calculus. Looking at the possible career paths in this field, I decided to become an actuary as it seemed to be a prestigious profession with great potential. After working in insurance for more than 10 years, I can say with confidence that I am more than happy with my career choice. Working for a reinsurance broker is especially exciting as each renewal and each client brings new challenges and new opportunities to learn and develop.

WHAT HAS SURPRISED ME THE MOST

The biggest surprise for me was the variety of people that work in the industry. Reinsurance creates so many niches and opportunities that almost everyone – from lawyers to quantum physicists – can fit in. Having a variety of cultures and points of view helps a company and its people understand the world better.

MY BACKGROUND

I graduated from Warsaw Economic School with a degree in Quantitative Methods – Economic. During my studies, I made the decision to join the insurance industry. Prior to joining Guy Carpenter, I spent eight years at a Polish insurance company working as a reinsurance analyst and insurance risk-management expert. I hope to further develop in my role, build valuable relations within and outside the company, and contribute to the overall success of the region and Guy Carpenter.
