

# Hi, I'm Angela

I am head of the local Guy Carpenter cat team in Munich, which is responsible for analytical services for our clients in Germany, Austria and Switzerland. We support clients in their natural risk assessment by modelling their portfolio-related losses arising from natural catastrophes. In order to understand and evaluate catastrophe risk models that companies use for risk management, reinsurance and regulatory purposes, model testing is also a relevant part of our work. My professional background is in mathematics.

---

## When I'm not at work I'm most happy...

In my free time I enjoy being with my family and spending time with my teenage daughters – accompanying them to their activities in and outside of school, and traveling together. It is great to see how the next generation is growing up. My husband and I share responsibilities at work and home, which helps both of us achieve a good work/life balance. I enjoy having time for myself to play sports or hang out with friends.

## What has changed since you started at Guy Carpenter?

Since I started at GC, new technologies have gained much more importance in the reinsurance sector and so at my own workplace. To name a few examples: automation of processes has increased efficiency of standard workflows, machine learning techniques are nowadays considered for analyzing big data and social media are now widely used for business communication. Global collaboration and networking has grown tremendously since I started at GC, which allows me to tap experts in various professional fields.

## What advice do you have for those starting their career?

An inspiring and challenging workplace is a great basis for a successful and satisfying professional career. It's important to exhibit a willingness to work with a team and show open-mindedness towards new trends and technologies. These are skills that will support anyone's professional development.
