

Hi, I'm Kitty

I am a Senior Vice President working on the GC Analytics team as the leader of China's actuarial team which provides a variety of reinsurance and actuarial consulting services to our clients in the region, including producing market statistics. I have more than 13 years' experience in the insurance industry. Before joining GC Analytics in May 2011, I worked as a Senior Actuarial Analyst at AXA General Insurance Hong Kong Limited for nearly three years, providing actuarial support on all pricing, reserving and analytical aspects for the Hong Kong and China operations. Before relocating back to Hong Kong in 2008, I worked as an Actuarial Analyst in Federated Insurance of Canada providing actuarial support on product pricing and development. I am a fellow of the Casualty Actuarial Society and hold a B.Sc degree in Actuarial Science and a Master degree in Statistics from University of Toronto.

When I'm not at work I'm most happy ...

Traveling around the world with my family and friends.

What in your life has brought or given you the greatest satisfaction or fulfillment?

Both my current job and my family bring me the greatest satisfaction. In my job, I can utilize my skills to help my clients and my team to solve problems. Looking after my family, especially my three-year old son, brings me a lot of joy and fulfillment after work.

What advice do you have for those starting their career?

Take ownership – this is so important in our world no matter if you are a leader or a team member. Taking ownership will make you do your best!

What has changed since you started at Guy Carpenter

I joined Guy Carpenter seven years ago as a junior in the current actuarial team which had only two people at the time. As our business portfolio has grown quickly in China the past few years, our team has grown from two to seven people and I have become their leader. It's been an incredible experience watching the progress the team has made in the last seven years.
